MULTICURRENCY MENUS

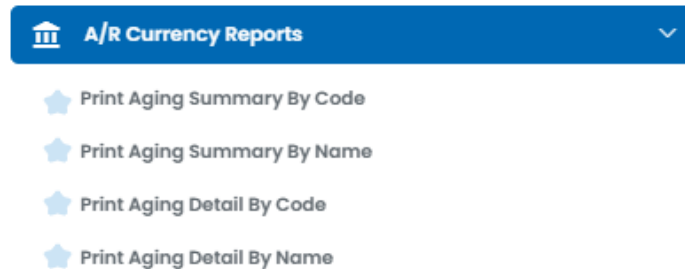

Overview of the Multicurrency menus

The Multicurrency module acts as a currency “translation” utility. It takes the financial data from one or more accounting modules, combines this data with information about currencies and exchange rates, and restates the data in the proper currency for the required document or report. Because this “translation” is the main task of Multicurrency, most of the module’s menus contain only reporting options. All other Multicurrency specific operations such as updating of currencies, currency exchange rates, and currency defaults are performed from the Setup Multicurrency menu.

Foreign Currency Reports Menus

All the reports generated from the Multicurrency module are just like the corresponding report in the other Fitrix modules except that they print amounts in the customer or vendor’s currency rather than your home currency.

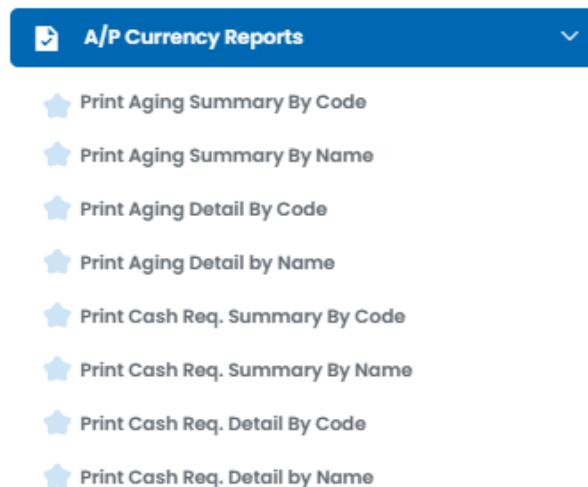

AR Currency Reports:

The screenshot shows a blue header bar with a house icon, the text "A/R Currency Reports", and a downward arrow. Below the header are four menu items, each preceded by a blue star icon:

- Print Aging Summary By Code
- Print Aging Summary By Name
- Print Aging Detail By Code
- Print Aging Detail By Name

AP Currency Reports:

The screenshot shows a blue header bar with a document icon, the text "A/P Currency Reports", and a downward arrow. Below the header are eight menu items, each preceded by a blue star icon:

- Print Aging Summary By Code
- Print Aging Summary By Name
- Print Aging Detail By Code
- Print Aging Detail by Name
- Print Cash Req. Summary By Code
- Print Cash Req. Summary By Name
- Print Cash Req. Detail By Code
- Print Cash Req. Detail by Name

OE Currency Reports:

-  O/E Currency Reports 
-  Print Open Order Summary
-  Print Open Order Detail
-  Print Salesperson Summary
-  Print Salesperson Detail
-  Print Open Order Item Summary
-  Print Open Order Item Detail
-  Print Customer Order Summary
-  Print Customer Order Detail

PO Currency Reports:

-  P/O Currency Reports 
-  Order Summary by PO Num
-  Order Summary by Buyer
-  Order Summary by Vendor
-  Order Detail by PO Num
-  Order Detail by Buyer
-  Order Detail by Vendor
-  Price Change Report

Setup Multicurrency menu

-  Setup Multicurrency 
-  Update Multicurrency Defaults
-  Print Multicurrency Defaults
-  Update Currencies
-  Print Currencies
-  Update Daily Exchange Rates
-  Print Daily Exchange Rates
-  Update Period Exchange Rates
-  Print Period Exchange Rates

This menu is used for both setting up Multicurrency and for maintaining currency codes and exchange rates. Each update option has a Print option counterpart. The menu options are as follows:

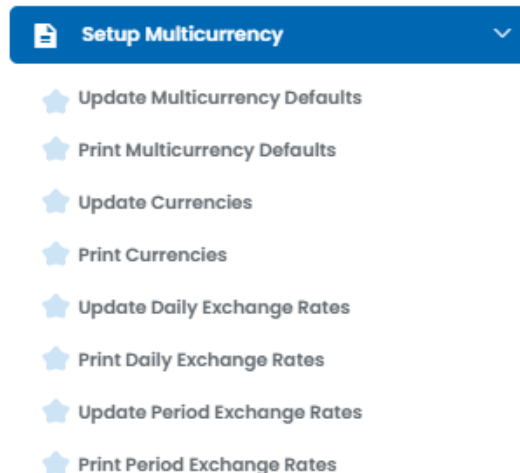

Update Multicurrency Defaults – used to define the home currency for your company, specify which Fitrix modules will use Multicurrency, and to assign an exchange rate type for each module that will use Multicurrency.

Update Currencies – used to set up your foreign currency codes and define the GL account numbers that will be the Difference on Exchange account for each currency.

Update Daily Exchange Rates - used to enter an exchange rate for each currency code and specify the date for which this exchange rate applies.

Update Period Exchange Rates – used to enter an exchange rate for each currency code and specify the period and year to which this exchange rate applies.

MULTICURRENCY SET UP

Update Currencies

Menu option MC-5-c

The first step in setting up Multicurrency is to set up your currency codes including a currency code for your home currency.

The screenshot shows the 'Update Currencies' interface in Fitrix ERP. The form is titled 'Update Currencies' and has a menu bar with 'File', 'Edit', 'View', 'Navigation', 'Tools', 'Actions', and 'Help'. The main form area contains three input fields: 'Currency Code' with the value 'STD', 'Description' with the value 'HOME CURRENCY US\$', and 'Difference on Exchange Account' with the value '811000000'. A search icon is next to the account number field. Below the fields is a '1 of 1' indicator. The footer shows 'GBC Version: 4.01.10.sidebarmenu-202401162045' and 'Fitrix ERP'.

Currency Code – enter a currency code of up to three characters.

Description - enter a description for the currency code.

Difference in Exchange Account – enter the GL account for posting the differences that arise from changes in the exchange rate. You can use the same account number for each currency code or a different one for each code.

Running the Post Cash Receipts options posts the difference between the amount you expected to get in home currency and what you actually received in home currency. Running the Post AP Check program posts the difference between what you expected to pay in home currency and what you actually paid in home currency.

Update Multicurrency Defaults

Menu option MC- 5 –a

The next step is to activate Multicurrency using this program.

The screenshot shows the 'Update Multicurrency Defaults' window in Fitrix ERP. The window has a title bar with the Fitrix ERP logo and the text 'Update Multicurrency Defaults'. Below the title bar is a menu bar with 'File', 'Edit', 'View', 'Navigation', 'Tools', 'Actions', and 'Help'. Under the menu bar is a toolbar with icons for 'Find', 'Prev', 'Next', 'Add', 'Update', 'Delete', and 'Browse'. The main content area contains several input fields: 'Home Currency:' with a dropdown menu set to 'STD' and a text field containing 'HOME CURRENCY US\$'; 'Use Multicurrency in AR and OE:' with a dropdown menu set to 'Y'; 'Rate Type for AR:' with a dropdown menu set to 'STAND' and a text field containing 'STANDARD RATE'; 'Rate Type for OE Pricing:' with a dropdown menu set to 'STAND' and a text field containing 'STANDARD RATE'; 'Use Multicurrency in AP and PO:' with a dropdown menu set to 'Y'; 'Rate Type for AP:' with a dropdown menu set to 'STAND' and a text field containing 'STANDARD RATE'; and 'Rate Type for PO Pricing:' with a dropdown menu set to 'STAND' and a text field containing 'STANDARD RATE'. At the bottom left of the window, it says '1 of 1'. At the bottom right, it says 'Fitrix ERP'. The footer of the window contains the text 'GBC Version: 4.01.10.sidebarmenu-202401162045'.

Home Currency- enter the currency code for your home currency.

Use Multicurrency in AR and OE – Enter Y to activate Multicurrency in Accounts Receivable and Order Entry. Leave set to N if you will not be using multicurrency in these modules.

Rate Type for AR – enter the rate type you want to use for the AR module. The rate types are DAILY (rate is good for one day) and STAND (rate is good for an entire accounting period).

Rate Type for OE Pricing – enter the rate type you want to use for the OE module. The rate types are DAILY (rate is good for one day) and STAND (rate is good for an entire accounting period).

Note: If you choose to use Multicurrency for OE you MUST also use it for AR.

Use Multicurrency in AP and PO – Enter Y to activate Multicurrency in Accounts Payable and Purchasing. Leave set to N if you will not be using multicurrency in these modules.

Rate Type for AP – enter the rate type you want to use for the AP module. The rate types are DAILY (rate is good for one day) and STAND (rate is good for an entire accounting period).

Rate Type for PO Pricing – enter the rate type you want to use for the PO module. The rate types are DAILY (rate is good for one day) and STAND (rate is good for an entire accounting period).

Note: If you choose to use Multicurrency for Purchasing you MUST also use it for AP.

When you press ENTER to exit and save the Multicurrency Default table, if you have changed the Use Multicurrency in AR/OE (AP/PU) from N to Y, you will see the following prompt:

*You have activated Multicurrency for AR/OE (AP/PU).
Enter 'Y' to set all currency codes in the customer (or
vendor) and activity tables to the home currency value
shown above. Press 'N' to cancel.*

If you answer 'Y' to this prompt, the home currency is inserted into every record for:

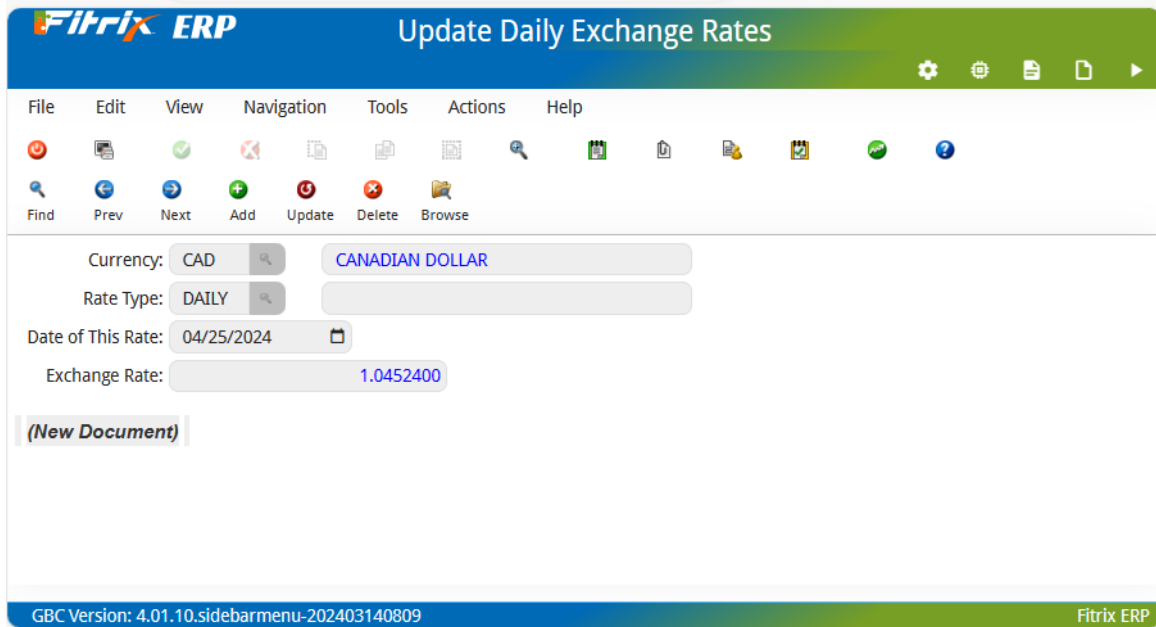

- | AR/OE | AP/PU |
|---------------------------|------------------------------|
| • existing customers | existing vendors |
| • outstanding AR invoices | outstanding AP invoices |
| • AR Cash Receipts | AP Cash Disbursements |
| • AR Activity Records | AP Activity Records |
| • all existing orders | all existing purchase orders |

You must then go into specific customers and vendors and enter their multicurrency code.

Update Daily Exchange Rates

Menu option MC-5-e

The records entered with this program must be unique combinations of currency code and date. You cannot add two records with the same currency code and date. Daily exchange rates are only valid for a single date.

Currency code – enter a currency code that has previously set up using the Update Currencies program. Zoom is available.

Rate Type – Defaults to Daily

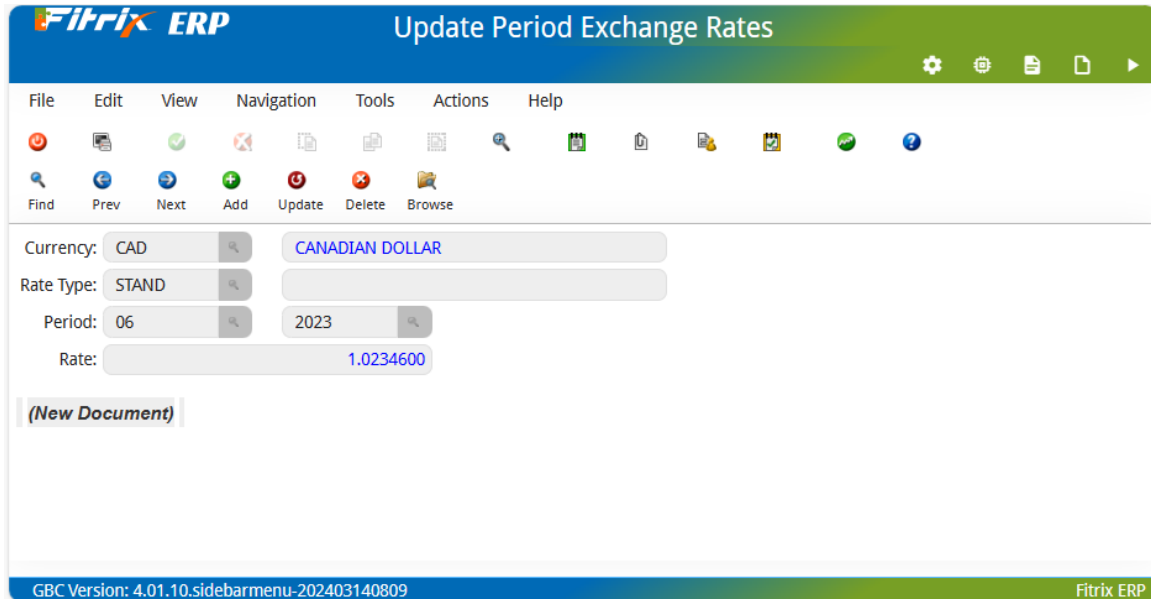

Date of This Rate – the date this exchange rate is good for.

Exchange Rate – enter to exchange rate for this currency code is it relates to one of your home currency. In the example above the home currency defined in the Update Multicurrency program is U.S. dollars so 1.00 USD equals 1.0453 Canadian.

Update Period Exchange Rates

Menu option MC-5-g

The records entered with this program must be unique combinations of currency code and period. You cannot add two records with the same currency code and period.

Currency code – enter a currency code that has previously set up using the Update Currencies program. Zoom is available.

Rate Type – Defaults to STAND

Period – the period and year this exchange rate is good for.

Exchange Rate – enter to exchange rate for this currency code is it relates to one of your home currency. In the example above the home currency defined in the Update Multicurrency program is U.S. dollars so 1.00 USD equals .7246 Euros.

MUTICURRENCY IN ACCOUNTS PAYABLE

Update Vendor Information

Once you have set up your currency codes and activated the Multicurrency module you must now go into each vendor record and change the multicurrency code from your home

currency code to their foreign currency code. Please note that you cannot change the currency code of a vendor that has existing activity on the system. This is to ensure that the balance and activity for the vendor remain in a single currency.

Create Recurring Documents

Create Recurring documents will use the current exchange rate and the same currency code as the original documents. If a current exchange rate is not found, an error message is printed and the recurring document is not created.

Print Payment Due Report and Create Automatic Checks

If using multicurrency in AP, the currency code appears on the Select vendors screen. The reports are sorted by currency code and there are subtotals for each currency.

While the Create Automatic Checks program can be used to create checks in foreign currencies, in most if not all cases you will create checks for your home currency vendors only. This is accomplished by specifying your home currency in the Select vendors screen .

Update AP Checks

The currency code is retrieved from the vendor table and cannot be changed.

GBC Version: 4.01.10.sidebarmenu-202403140809 Fitrix ERP

Print Check Listing

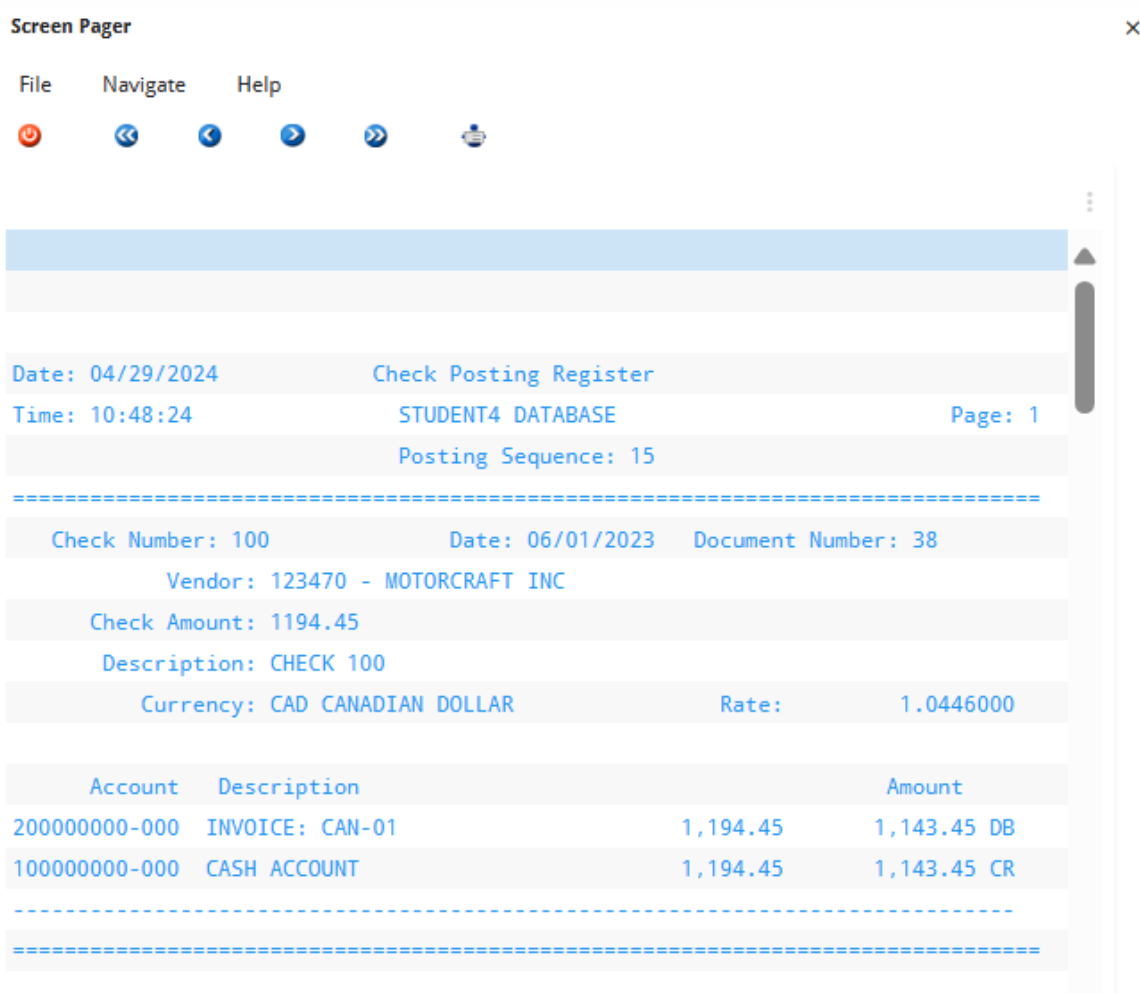

The currency code and exchange rate are printed for each check. The foreign currency amount is printed as well as the home currency amount that will be posted to the General Ledger. If an exchange rate for the check date is not found, an error message will print on the report.

Post Checks (menu option AP-2-h):

This program will calculate the difference between the home currency amount originally posted for the invoice (the amount that posted to the General Ledger) and the home currency equivalent of the foreign currency at the current exchange rate in place when checks are posted. This difference will post to the difference on exchange GL account number associated with the foreign currency code in the Update Currency Codes program.

If a current exchange rate is not found an error message will print and the cash disbursement will not post. You must have an exchange rate that has a date that matches the check date and then the check will post.

The Gain/Loss on foreign exchange was calculated as follows:

	Canadian	Dollars	Exchange rate
AP Invoice	599.00	573.43	1.0446
Cash Disb	599.00	577.35	1.0375
Gain/(Loss)		(3.92)	

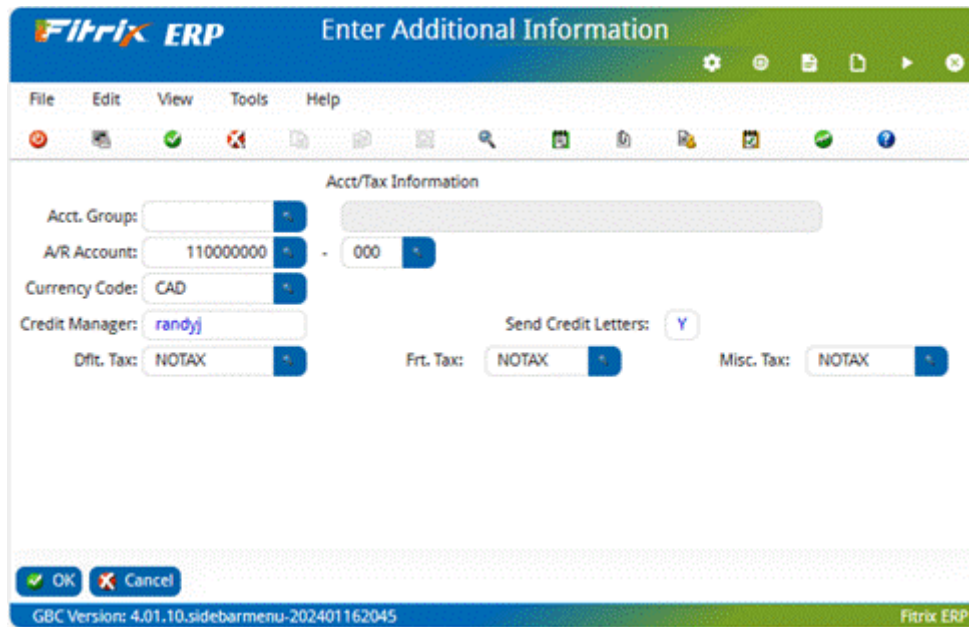

Because the value of the US dollar to the Canadian dollar decreased between the time the vendor invoiced you and you made payment (1 Canadian dollar was 1.0446 US dollars and then decreased to 1.0375 US dollars) there was a loss booked on the difference in exchange rate since more US dollars had to be paid by you.

MULTICURRENCY IN ACCOUNTS RECEIVABLES

Update Customer Information

Once you have set up your currency codes and activated the Multicurrency module you must now go into each customer record and change the multicurrency code from your home currency code to their foreign currency code. Please note that you cannot change the currency code of a customer that has existing activity on the system. This is to ensure that the balance and activity for the customer remain in a single currency.

To enter the currency code click on the Addl Info icon on the toolbar and this screen will display:

The screenshot shows the 'Enter Additional Information' dialog box in the Fitrix ERP system. The window title is 'Fitrix ERP Enter Additional Information'. The menu bar includes 'File', 'Edit', 'View', 'Tools', and 'Help'. The toolbar contains various icons for navigation and actions. The main area is titled 'Acct/Tax Information' and contains the following fields:

- Acct. Group: [Empty dropdown]
- A/R Account: 110000000 - 000
- Currency Code: CAD
- Credit Manager: randyj
- Dflt. Tax: NOTAX
- Send Credit Letters: Y
- Fr. Tax: NOTAX
- Misc. Tax: NOTAX

At the bottom left, there are 'OK' and 'Cancel' buttons. At the bottom right, the version information 'GBC Version: 4.01.10.sidebarmenu-202401162045' and 'Fitrix ERP' are displayed.

Update Receivable Documents

The currency code is automatically retrieved from the Customer Information table and appears on this screen. You cannot change the currency code.

If the exchange rate for the invoice date used for the invoice is not found, an error message will display and the adding of the invoice is terminated.

Print Cash Receipts Listing

The currency code and exchange rate are printed for each cash receipt. The foreign currency amount is printed as well as the home currency amount that will be posted to the General Ledger.

Screen Pager X

File Navigate Help

Date: 04/29/2024 Cash Receipts Listing
Time: 14:39:20 STUDENT4 DATABASE Page: 1

Document Number: UNASSIGNED Date: 07/01/2023 Check Number: CHECK-1
Customer: 18 - GIDEON ALL AROUND AUTO SUPPLY
Description: CHECK ONE Check Amount: 1000.00
Currency: CAD CANADIAN DOLLAR Rate: 1.0500000

Account	CAD	Amount
110000000 -300 INV: CAD-100 DOC: 137	1,000.00	952.38 CR
100000000 -000 CASH ACCOUNT	1,000.00	952.38 DB
638500000 -000 SALES TAX EXPENSE	.00	4.92 DB
110000000 -000 ACCOUNTS RECEIVABLE	.00	4.92 CR

Total Debits	Total Credits
957.30	957.30

If a current currency exchange rate is not found an error will print on this report as shown here and the cash receipt will not post. You must enter a current exchange rate with a date that matches the cash receipt date and run the posting again.

The Gain/Loss on foreign exchange was calculated as follows:

	CADs	US Dollars	Exchange rate
AR Invoice	1,000.00	963.86	1.0375
Cash Rcpt	1,000.00	956.94	1.0450
Gain/(Loss)		6.92	

Because the value of the Canadian dollar to the US dollar increased between the time the customer was invoiced and then made payment (1 CAD was 1.0375 US dollars and then increased to 1.0450 US dollars) there was a loss made on the difference in exchange rate since less US dollars had to be paid to you.

Create Finance Charge Invoices

This program creates finance charges using the currency code found in the Customer Information table. If a current exchange rate is not found, an error message will print on the report and the finance charge invoice will not be created.

Create Recurring Documents

Create Recurring documents will use the current exchange rate and the same currency code as the original documents. If a current exchange rate is not found, an error message is printed and the recurring document is not created.

MULTICURRENCY IN ORDER ENTRY

Update Customer Orders

The currency code that displays on this screen is no entry and is retrieved from the Customer Information table. Prices that you enter on the customer order should be prices in the foreign currency amounts (ie- if the currency code is for CAD then the price you enter for each item should be the price in CAD).

If you use an order date for a foreign currency customer for which there is no exchange rate for that date an error will display and you will not be able to enter the order. Enter the exchange rate for the order's date and then you may continue.

The exchange rate in effect when the order is entered is stored with the order. When the order is posted and the AR open item created the exchange rate stored with the order is also stored with the AR open item. When the payment is received from the customer the system will compare the original exchange rate with the exchange rate in effect when the payment is received, calculate the difference in exchange rates, and post this dollar amount to the Difference on Exchange GL account number assigned to the customer's currency code using the Update Currencies program.

Print Order Acknowledgements

The currency code and currency description print on the order acknowledgement.

Print Invoices and Memos

The currency code and currency description print on the invoice/memo.

Print Edit List / Post Order Entry Documents

The amounts that print on this report are translated to the home currency. Amounts posted to General Ledger are translated to the home currency. Amounts posted to Accounts Receivable are also maintained in the home currency. To view the amount due from your customers in their home currency you must run the OE and AR Currency reports in the Multicurrency module

In the example below the price to the customer was 2000.00 Canadian dollars and the exchange rate when the order was processed was 1.0452 Canadian to \$1.00. This translates into a sales price of \$ 1913.88 USD ($2000.00 \text{ CAD} / 1.0452 = 1913.88 \text{ USD}$).

MULTICURRENCY IN PURCHASING

Update Item Catalog

The currency code is retrieved from the vendor record. The cost amount entered here can be in either the home or foreign currency.

To toggle back and forth between the home currency and the foreign currency select Navigation events from the Tools option on the toolbar and select Translate Currency Event from the navigation screen that displays.

In this example the CAD cost of \$6.000 is translated to \$5,7416 USD

Update Vendor Catalog

The currency code is retrieved from the vendor record. The cost amount entered here can be in either the home or foreign currency just like the item catalog.

To toggle back and forth between the home currency and the foreign currency select Navigation events from the Tools option on the toolbar and select Translate Currency Event from the navigation screen that displays.

Requisitions Menu

Assign vendors

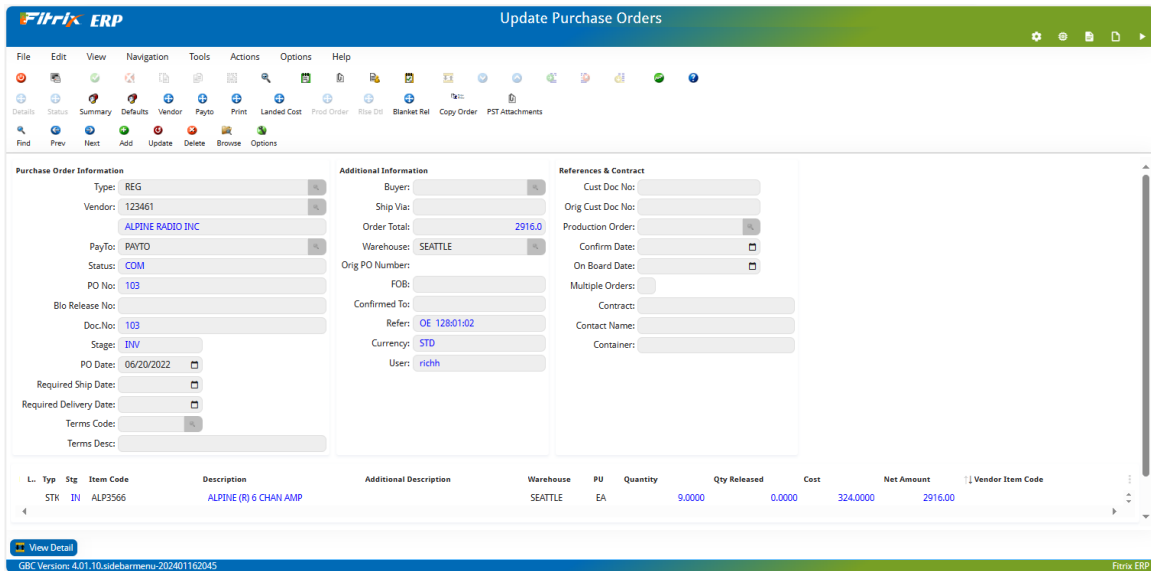

The foreign and home currency costs display on the vendor zoom screen.

Create PO from Requisition

The currency code and description print on the purchase order. The amounts on the purchase order are in the foreign currency.

Update Purchase Orders

Prices that you enter on the vendor purchase order should be prices in the foreign currency amounts (ie- if the currency code is for Canadian dollars then the price you enter for each item should be the price in Canadian dollars).

If you use a purchase order date for a foreign currency vendor for which there is no exchange rate for that date an error will display and you will not be able to enter the purchase order. Enter the exchange rate for the purchase order's date and then you may continue.

The exchange rate in effect when the purchase order is entered is stored with the purchase order. When the purchase order is posted through to AP the AP open item created the exchange rate stored with the purchase order is also stored with the AP open item. When payment is made to the vendor the system will compare the original exchange rate with the exchange rate in effect when the payment is made, calculate the difference in exchange rates, and post this dollar amount to the Difference on Exchange GL account number assigned to the vendor's currency code using the Update Currencies program.

Print Purchase Orders

The currency code and description print at the bottom of the purchase order.

Print Receipts Edit and Post

All amounts posted to Inventory and General Ledger are translated to the home currency.

Update AP Invoices

The currency of the invoice is determined by the currency of the vendor. Amounts entered for a foreign currency vendor are in the foreign currency. The exchange rate used for an invoice is the same as that of the purchase order.

Print Invoice Edit and Post Invoices

The amounts posted to the General Ledger are translated into the home currency. The amounts posted to AP is also in home currency. To view the amount due to your vendors in their home currency you must run the PU and AP Currency reports in the Multicurrency module.
